

New Entrance Mat – Removes water completely

Entrance mats generally serve two purposes. Apart from making an entry attractive, they need to clean foot wear and remove water.

Most conventional entry mats do this to varying degrees and mat types fall into one of two types: **Closed** or **Open** Mats.

HOW ALUMAT 15D (DRAINING) DIFFERS FROM ALL OTHER MATS?

ALUMAT 15D (patent pending) can be part of a comprehensive drainage system. This Closed /Draining entrance mat has the unique ability to collect water and discharge freely to a simple drain under the mat, or to a threshold drain.

ALUMAT 15D like open mats, has drain channels. The difference is, the drain channels do not discharge everywhere under the mat. Instead the water is channelled to a specific point where the water is discharged under the mat so it can be collected and removed. This new Closed/Draining type mat has the best of both mat types.

All that is required is a single strip drain recessed in the floor of the mat well (50mm x 10-30mm deep) which discharges to a drainage point.

BENEFITS

- Continuous water flow can be collected and removed for minimal cost.
- Dirt can be removed easily from the mat surface so the base on the underside of the mat is kept clean and dry.
- 20 year frame warranty on extra heavy duty anodized alloy with replaceable infills.
- Even if no drainage is possible, mat drain channels increase water containment, keeping interiors drier.

Ensure your next project has the latest mat innovations to protect your building interiors

ALUMAT 15D (DRAINING)

Our new drainage mat featuring alternating drain channels and elevated infills

Installed to Suit Your Drainage System

ALUMAT 15D installed with drainage, in this case, to a threshold drain. Alternate drain channels move water to droppers over a strip drain recessed in the mat well base

Undercut Drain Channel

Recess strip drain discharging to a threshold drain. Alternative drainage can be achieved by installing a simple water waste in the mat well base if no threshold drain is available

HOW TO ORDER?

Simply specify ALUMAT 15D and advise the position of the strip drain. ALUMAT Flooring Solutions will provide the mat in easy to connect interlocking sections that have the drainage outlets completed to fit your specific project, so they just need to be laid in place.

Call ALUMAT now to receive a free information package, samples or a no-obligation in-house presentation.
